

선형회귀모델 추가로 공부하면 좋을 토픽

1. Extra sums of squares
2. Uses of extra sums of squares in tests for regression coefficients
3. Multicollinearity – Variance inflation factor
4. Identifying influential cases – Cook's distance, DFFITS, DFBETAS
5. Forward selection, Backward selection, Stepwise selection
6. Tests for satisfying error assumptions using residuals (normality, constant variance, independence)
7. Weighted least squares (advanced)
8. Robust regression (advanced)
